[Trains](#) are an interesting and environmentally-friendly way to travel. In hot and crowded countries like India, however, comfort might be a poor adjective to describe the experience of the average train passenger. But Indian Railways, a government owned and operated rail network, recently announced that it would be tapping the power of the sun to make traveling in its coach cars a more palatable experience. A partnership with the Indian Institute of Technology will allow the installation of solar harvesting equipment that will supply enough electricity for [on-board air conditioning](#), as well as more efficient internal lighting.
