This has to be one of the coolest pieces of solar powered off grid technology ever seen. It's basically a 15kW power station housed in a shipping container, which makes it easily deployable to any location in the world at a moments notice. It can be shipped by rail, by sea, and of course by truck.

Once on site, the unit literally transforms itself into a massive solar powered electric station capable of producing 15,000 watts of electricity.

Oh, and it has WiFi too!
